The nucleic acids encode mammalian transporter proteins and are useful for the treatment (e.g. by gene therapy or antisense technology) of any of a wide variety of symptoms associated with biological disorders (e.g. breast and prostate cancer) or imbalances and as probes for the identification, selection and validation of novel molecular targets for drug discovery. The proteins may be used to raise anti-NHP antibodies. The present sequence represents an NHP of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral scierosis, and shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activiny, inhibin activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             specification.

The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system. Such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as alzhelmer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activitics such as: Immune system suppression, activity, chemotactic/chemokinetic activity, hamostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel nucleic acids and polypeptides, useful such as central nervous system injuries -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           19-OCT-2000; 2000US-0693036

The proteins may be used to raise anti-NHP antibodies. The present sequence represents an NHP of the

The invention relates to novel human proteins (NHP) and the nucleic acids encoding them. The nucleic acids encode mammalian transporter proteins and are useful for the treatment (e.g. by gene therapy or antisense technology) of any of a wide variety of symptoms associated with biological disorders (e.g. breast and prostate cancer) or imbalances and as probes for the identification, selection and validation of novel molecular targets for drug discovery. The proteins may be used to raise anti-NHP antibodies. The present sequence represents an NHP of the

                                                                                                                                                                                                                                                                                                                       300
                                                                                                                                                                                                                                                                                                                                                                                                                                                             ۲.
```

The invention relates to human nucleic acids (AAI57798-AAI61369) and CC the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful CC in gene therapy. A composition containing a polypeptide or polynucleotide CC of the invention may be used to treat diseases of the peripheral nervous System, such as peripheral nervous injuries, peripheral neuropathy and CC localised neuropathies and central nervous system disease, such as CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic CL lateral sclerosis, and Shy-Drager Syndrome. Other uses include the CC utilisation of the activities such as: Immune system suppression, CC activin/Inhibin activity, chemotactic/chemokinetic activity, haemostatic CC and thrombolytic activity, cancer diagnosis and therapy drug screening, CC assays for receptor activity, arthritis and inflammation, leukaemias and CC N.S disorders.

CC Note: The sequence data for this patent did not form part of the printed of the printed or contains and contain

Example

Novel nucleic acids and polypeptides, useful such as central nervous system injuries -

for

treating disorders

                                                                                         assays for constant of the sequential of the seq
                                                                                                                                                                                   The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAAI88642-AAI44213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as alicediated neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S. disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Tang

This sequence represents a human protein kinase homolog (PKH) of the Ci invention. The PKH sequences may be used in the prevention, treatment and Cd diagnosts of diseases associated with inappropriate PKH expression such as cancers, autoimmune/inflammatory disorders and reproductive defects. They may be used to treat disorders associated with decreased PKH CC expression such as cancers (e.g. lymphoma, melanoma and cancers of the Cc breast lung and prostate), autoimmune/inflammatory disorders with decreased PKH CC (e.g. AIDS, asthma and diabetes mellitus), and reproductive defects (e.g. infertility, ovulatory defects, endometriosis and concert of the activity of guartions or deletions in a patient's genome that affect Cc patients own production of PKH polypeptides. Additionally, the DNA may be expressing inactive proteins or to supplement the cc patients own production of PKH polypeptides. Additionally, the DNA may be used to produce PKH, according to standard recombinant DNA methodology, Cc express the protein. Conversely, antisense nucleic acid molecules may be administered to down regulate PKH expression. The DNA, and antisense Cc express the protein. Conversely, antisense nucleic acid molecules may be completed to down regulate PKH expression. The DNA, and antisense Cc exquences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, also be used to study the expression and function of PKH polypeptides and their role in metabolism. The PKH and function of PKH polypeptides and their role in metabolism. The PKH and in assays to identify. The anti-PKH antibodies and activity. The anti-PKH antibodies may also be used as activity. The anti-PKH antibodies may also be used as cc diagnostic agents for detecting the presence of PKH polypeptides in a diagnostic agents for detecting the presence of PKH polypeptides in a diagnostic agents for detecting the presence of PKH polypeptides and cc samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acids encoding a human protein kinase homolog useful for preventing, diagnosing and treating cancer, autoimmune/inflammatory disorders and reproductive defects - \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Protein kinase homologue; human; PKH; diagnosis; therapy; cancer: autoimmune disorder; infiammatory disorder; reproductive defect; diabetes mellitus; infertility; ovulatory defect; endometriosis; polycystic ovary syndrome.

liver cancer), autoimmune/inflammatory disorders (e.g. Acquired Immune deficiency Syndrome (AIDS), anaemia, asthma. Crohn's disease and multiple sclerosis) and reproductive disorders (e.g. tubal disease, or ectopic pregnancy and polycystic ovary syndrome). PKH, its catalytic or immunogenic fragment are used for screening libraries of compounds in any of the drug screening techniques. PKH nucleic acids are used to generate hybridisation probes useful in mapping the naturally occurring genomic sequences. PKH acid as antigens in the production of antibodies against protein kinases (PK) and in assays to identify modulators of PK expression and activity. PKH is also used in protein therapy. The present sequence is human protein kinase homolog-6 (PKH-6). Human protein kinase homologs (PKH) and their CDNA molecules are use the prevention, diagnosis and treatment of diseases associated with increased or decreased expression of PKH. Examples of such disorder include, cancer (e.g. adenocarcinoma, melanoma and bone, breast and include, cancer (e.g. adenocarcinoma, melanoma and bone, breast and include, cancer (e.g. adenocarcinoma, melanoma and bone, breast and include, cancer (e.g. adenocarcinoma, melanoma and bone, breast and include, cancer (e.g. adenocarcinoma, melanoma and bone, breast and include, cancer (e.g. adenocarcinoma, melanoma and bone, breast and include, cancer (e.g. adenocarcinoma, melanoma and bone). breast and cquired immune disorders are used

                                                                                                                                                                                                                                      Q
                                                                                                                                                                                                                                                                            В
                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes primer sets for synthesising 5602 CC full-length cDNAs defined in the specification. Where a primer set CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary CC to the complementary strand of a polynucleotide which comprises one of CC the 5602 nucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end CC sequence and an oligonucleotide comprising a sequence, where the CC complementary strand of a polynucleotide which comprises a 5'-end cC polynucleotide which comprises a 15 nucleotides and the combination of CC the 5'-end sequence, 3'-end sequence is selected from those defined in CC the 5'-end sequence, 3'-end sequence is selected from those defined in CC the 5'-end sequence, 3'-end sequence is selected from those defined in CC the precipion of the primers are useful for synthesising polynucleotides, and therapy and CC particularly full-length cDNAs. The primers are also useful for the therapy and CC the full-length cDNAs. The primers are seful for the proteins encoded by CC the full-length cDNAs. The primers allow obtaining of the full-length CDNAs as all y without any specialised methods. AAH03165 to AAH13628 and CC AAB95893 represent human amino acid sequences; AAB92446 to AAH13629 to AAH13629 to AAH13629 cof the present invention.

                                                                                                                             ρy
                                                                                                                                                                                                                                                               AAU03501-AAU03557 represent novel human protein kinases #1-57. The CC novel protein kinases have been identified as members of the tyrosine CC or serine/threonine kinase (PTK and STK) families. The polynucleotides cencoding protein kinases and the polypeptides may be used in the CC encoding protein kinases and the polypeptides may be used in the CC cancers (especially cancers of haematopoietic origin), cardiovascular CC cancers (especially cancers of haematopoietic origin), cardiovascular CC disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), immune related diseases (e.g. rheumatoid arthritis), neurological CC disorders (e.g. schizophrenia), neurodegenerative disorders (e.g. fifetious CC disease (e.g. HIV) and reproductive disorders (e.g. as finally, polynucleotides encoding protein kinases may be cased for gene therapy and as DNA probes in diagnostic assays.

CC distorably, polynucleotides encoding protein kinases may be cased for gene therapy and as DNA probes in diagnostic assays.

CC modulators of protein kinase expression and activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, haematopolesis regulating activity, infinibin activity and may be useful in the diagnosis and/or inflammation cancer, leukaemia, nervous system disorders, arthritis and

Xue AJ,
                                                                                                                                                                                                                           The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAK781323-AAK80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, in the diagnosts and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

                                                                                                                                                                                                                                                          AAY68769-95 and AAY68797-99 represent human phosphorylation effectors (PHSP), designated PHSP1-PHSP1 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from CDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated PHSP expression/activity.
                                                                                                                                                                                                                                                                                                                                                                                                                    and
                                                                                                                                                                                                                                      Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    В
                       The present sequence is a novel protein kinase. The novel protein kinases CC and the nucleic acids that encode them may be used in the treatment and CC diagnosis of diseases associated with inappropriate kinase expression CC such as immune-related diseases and discreters, cardiovascular disease, cu neurodegenerative diseases and/or cancers. The nucleic acids and cc complementary sequences may also be used as DNA probes in diagnostic CC assays. The kinase polypeptides may be used as antigens in the production CC of antibodies of kinase expression and activity. Anti-kinase antibodies of an activity. Diseases related to down regulate kinase CC expression and activity, include rheumatoid arthritis, atherosclerosis, autoinmune CC disorders, complications of organ transplantation, myocardial infarction, CC immune disorders, cardiomyopathies, strokes, renal failure.

CC coxidative-stress related disorders, chronic inflammatory bowel disease, CC coxidative, psoriasis, rhinitis, autoimmunity, diabetes, cancers and CC reproductive disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; mouse; protein kinase; antiarthritic; antisclerotic; osteopathic; immunosuppressive; cardiant; renal; antiinflammatory; antiasthmatic; dermatological; antidiabetic; antiinfertility; gene therapp; vaccine; immune disorder; cardiovascular disease; neurodegenerative disease; cancer; autoimmune disorder; stroke; inflammatory bowel disease; inflammatory pelvic disease; multiple sclerosis; psoriasis.
